Flowstones are a water play feature designed with natural river flow-patterns in mind as well as children’s unending creativity.

Flowstones are a robust and flexible set of six stones making it possible to pour water from one form to the other.

Flowstones stimulate the child’s imagination and practical ability playing with sand, water and stone. A sand pit of any size is ideal though other surfaces will do.

Flowstones bring an esthetical experience to the child: The soft, rounded forms are just like water worn stones found in the river or on the beach. The material is reconstituted stone cast with granite aggregates where the careful hand finishing brings out the natural colour of the stone. The weight of each is approx. 2.5 kg. Sets come complete with a tailor-made wooden storage trolley, watering can and blocks to create stepped foundations.

Flowstones require no power or plumbing. They can also be mounted on a fixed base with hand pumped water re-circulated to create a unique living ‘stream’ feature for indoors as well as outdoors.

Flowstones provide children with the most realistic experience of different water flow patterns found in nature.

Designed in Sweden, Flowstones are now produced in the UK by Ebb & Flow Ltd. For further details, please contact:-
